Tissue viability is an important aspect of nursing care that Hopkins (2009) suggests focuses on all aspects of skin and soft tissue wounds. This involves much more than just wound management, but also the wider political, social, economical and technological influencing factors and includes consideration of the concepts of professional team working and education. Bearing this in mind, it is also clear that - in the field of orthopaedic nursing - tissue viability is an important consideration.

As a result the International Journal of Orthopaedic & Trauma Nursing will be publishing a special issue focusing on Tissue Viability/Wound Care. We invite high quality papers presenting, for example, the findings of controlled studies evaluating interventions and innovations, descriptive studies using either or both quantitative or qualitative approaches as well as systematic reviews investigating the state of the science in discrete tissue viability and wound focused areas of orthopaedic and trauma care in any setting. Articles that focus on Practice Development are also welcomed – authors should consult the journal’s Aims & Scope and website for more information at www.orthopaedictraumanursing.com

Manuscripts for consideration should be submitted at http://ees.elsevier.com/yjoon

(please select ‘Special Issue – Tissue Viability)

or further guidance can be sought from the editorial office – yjoon@elsevier.com

The International Journal of Orthopaedic and Trauma Nursing is a peer-reviewed journal that seeks to promote the development and exchange of specialist knowledge within orthopaedic and trauma practice. The journal is devoted to nurses and other health professionals involved in the care of patients with orthopaedic and associated traumatic conditions.

The journal is the official journal of the Association of Maltese Orthopaedic Nurses, the Australia New Zealand Orthopaedic Nurses Association, Canadian Orthopaedic Nurses Association, RCN Society of Orthopaedic and Trauma Nursing and officially recognised by the Asian Association for Dynamic Osteosynthesis (Nursing), the Danish Orthopaedic Nurses Association (FSOS), Ortopedisjuksköterskor I Sverige (Sweden) and the International Collaboration of Orthopaedic Nursing
